INTERNATIONAL SEARCH REPORT

International application No. PCT/GB 00/00763

Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet) Box I This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons: Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely: Claims Nos.: because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically: Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a). Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet) This International Searching Authority found multiple inventions in this international application, as follows: see additional sheet As all required additional search fees were timely paid by the applicant, this International Search Report covers all As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee. As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.: No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: The additional search fees were accompanied by the applicant's protest. Remark n Protest No protest accompanied the payment of additional search fees.

International application No. PCT/GB00/00763

EXAMINATION REPORT - SEPARATE SHEET

Re Item IV

Lack of unity of invention

First invention (claims 1-7)

Special technical feature is the provision of a further valve (52) downstream of the junction between the conduits from the valve (65) and the outlet (51) of the vessel.

Second invention (claim 8)

Special technical feature is that the fluid transfer system for transferring fluid from a first container to a second container comprises a first pump (14) and a further jet pump (15).

The above mentioned inventions are not so linked by the same or corresponding special technical features, as to form a single general inventive concept. The Rule 13.1 and 13.2 PCT is therefore not met.

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive st p or industrial applicability; citations and explanations supporting such statem int

The nearest prior art for the subject-matter of independent claims 1 and 7 is described in WO-A-95 29792, which is discussed in the description.

Inventive step:

The provision of a further valve (52) downstream of the junction between the conduits from the valve (65) and the outlet (51) of the vessel.

Technical effect:

The valve (52) can be closed to stop the flow to the nozzle (54) when valve (65) is closed, and to stop air being drawn into the system through the nozzle (54) when valve (65) is open.

The dependent claims describe preferred embodiments of the invention and therefore they also meet the requirements of Art. 33 PCT.

WO 00/52679

PCT/GB00/00763

5/pots

FLUID SUPPLY SYSTEM

The present invention relates to a fluid supply system where a supply of clean fluid under pressure is connected to an entrainment vessel in which the clean fluid can take up another component.

Flow control in fluid supply systems is often achieved by valves. Valves can be damaged by some fluids or matter entrained by the fluids. It is a purpose of the present invention to provide a fluid supply system with a control valve arranged so that it is not damaged in the manner described above.

A fluid supply system employing a jet pump is disclosed in WO95/29792.

According to the invention there is provided a fluid supply system comprising a supply of clean fluid under pressure connected to an entrainment vessel in which the clean fluid can take up another component, an outlet from the container leading to a system outlet and a jet pump having a high pressure inlet, a lower pressure inlet and an outlet, the supply of pressurised clean fluid passing from the high pressure inlet to the lower pressure inlet of the jet pump en route for the inlet of the entrainment container and the outlet of the jet pump being connected through a valve to a junction between the outlet of the entrainment vessel and the system outlet.

30

35

10

20

25

When the valve is closed, the jet pump simply provides a conduit between its high pressure inlet and lower pressure inlet and the fluid flows through that conduit, then through the vessel and thence to the system outlet. When the carrier fluid enters the entrainment vessel it entrains the abrasive mixture therein and causes it to flow through the discharge tube 51. This is

CLAIMS

20

25

- 1. A fluid supply system including means (31,32) for supplying fluid under pressure connected to an inlet (6) of an entrainment vessel (1) in which the fluid can take up another component, an outlet (51) from the entrainment vessel (1) leading to a system outlet (54), and a jet pump (61) having a high pressure inlet (62), a lower pressure inlet (63) and an outlet (64), the supply of pressurised fluid passing from the high pressure inlet (62) to the lower pressure inlet (63) of the jet pump (61) en route for the inlet (6) of the entrainment vessel (1), and the outlet (64) of the jet pump (61) being connected through a valve (65) to a junction between the outlet (51) of the entrainment vessel (1) and the system outlet (54).
 - 2. A system according to claim 1, including a further valve (52) provided downstream of the junction between the conduits from the valve (65) and the outlet (51) of the vessel (1).
 - 3. A system according to claim 2, wherein the further valve (52) is operable to stop fluid flow from the system outlet (54) when the valve (65) is closed, and to stop air being drawn in through the system outlet (54) when the valve (65) is open.
 - 4. A system according to claim 2 or 3, wherein the further valve (52) is provided with a flushing system.
- 5. A fluid transfer system according to claim 1, 2, 3 or 4, comprising a further vessel (41) and means for transferring fluid from the entrainment vessel (1) to the further vessel (41), which means includes a first pump (14) and a further jet pump (15), the first pump (14) taking fluid from the further vessel (41) and feeding it under pressure to the high pressure inlet of the jet pump (15),

30

35

the low pressure inlet of the jet pump being connected to the entrainment vessel (1) and the outlet of the jet pump (15) being connected to the further vessel (41).

- A fluid transfer system according to claim 1, 2, 3 or 5 6. 4, including an additional entrainment vessel (70) having a supply (41) of the said another component, and an outlet (76) in fluid communication with an additional inlet (7) of the entrainment vessel (1); means (79) for connecting the outlet (64) of the jet pump (61) to the additional vessel 10 (70) to cause fluid to flow from the high pressure inlet (62) to the additional vessel (70) in which the fluid can take up the said another component and thence pass from the additional vessel outlet (76) to said entrainment vessel (1) in order to charge the entrainment vessel with the said other component (1) whilst maintaining flow to said system outlet (54) from entrainment vessel (1) outlet (51).
- 7. A fluid transfer system according to claim 6,
 20 comprising a further vessel (41) containing the said
 another component, and means for transferring fluid from
 the additional entrainment vessel (70) to the further
 vessel (41), which means includes a first pump (14) and a
 further jet pump (15), the first pump (14) taking fluid
 25 from the further vessel (41) and feeding it under pressure
 to the high pressure inlet of the jet pump (15), the low
 pressure inlet of the jet pump being connected to the
 additional entrainment vessel (70) and the outlet of the
 jet pump (15) being connected to the further vessel (41).

8. A fluid supply system including an entrainment vessel (1); means (31,32,61) for supplying fluid under pressure to an inlet (6) of the entrainment vessel (1) in which the fluid can take up another component, an outlet (51) from the entrainment vessel (1) leading to a system outlet (54); an additional entrainment vessel (70) having a supply (41) of the said another component, and an outlet (76) in fluid

14

communication with an additional inlet (7) of the entrainment vessel (1); means (79) for diverting fluid from said inlet (6) to the additional vessel (70) in which the fluid can take up the said another component and causing fluid to pass from the additional vessel outlet (76) to said entrainment vessel (1) in order to charge the entrainment vessel with the said other component (1) whilst maintaining flow to said system outlet (54) from entrainment vessel (1) outlet (51).

10

9. A fluid transfer system for transferring fluid from a first container (1) to a second container (41), including a first pump (14) and a jet pump (15), the first pump (14) taking fluid from the second container (41) and feeding it under pressure to the high pressure inlet of the jet pump (15), the low pressure inlet of the jet pump being connected to the first container (1) and the outlet of the jet pump (15) being connected to the second container (41).

Box I Observations where certain claims were found unsearchable (C ntinuation of item 1 of first sheet)
This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:
Claims Nos.: because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3. Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
This International Searching Authority found multiple inventions in this international application, as follows:
see additional sheet
As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:
R mark in Protest The additional search fees were accompanied by the applicant's protest. X No protest accompanied the paym int of additional si arch fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1-4,6 and 8

A further valve (52)

2. Claims: 5,7 and 9

A fluid transfer system including a first pump and a jet pump
